Caroline Betts
Allie Hissong

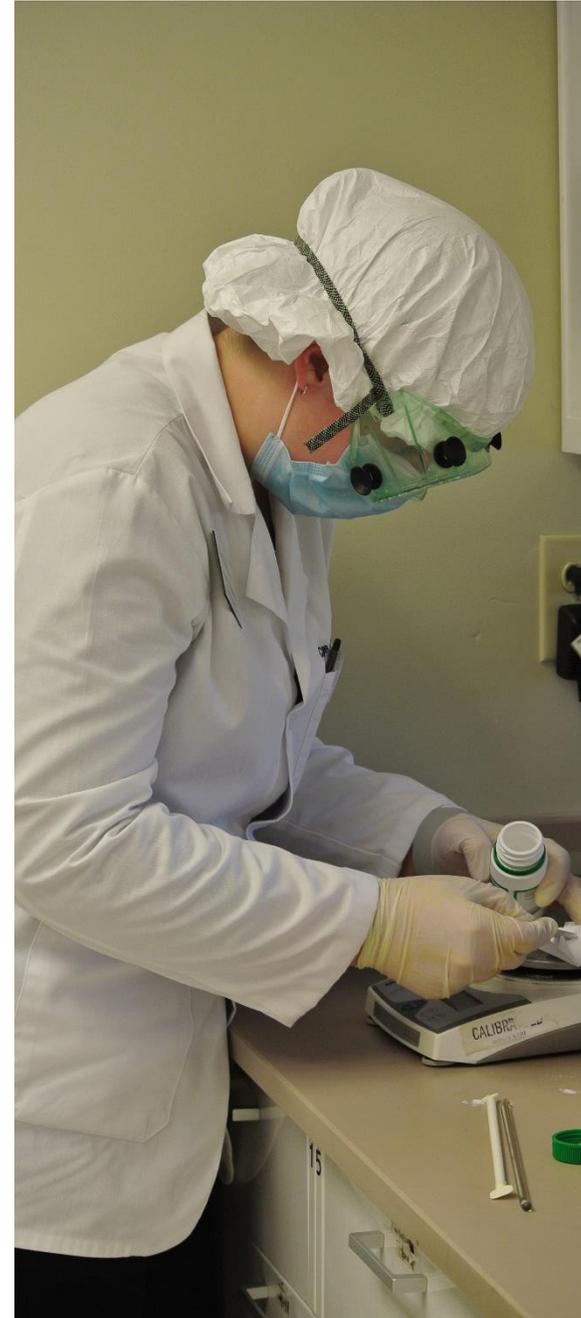

“We have enjoyed participating in the local competition for the past 2 years. We came in 2nd place the first year, but this year we finally got 1st! The competition gives us a chance to build teamwork skills and learn more about compounding. We also get to spend time with some of our favorite professors, which is a plus. We look forward to attending the National Competition!”

CAROLINE BETTS

"Compounding is one of the reasons that helped me decide to become a pharmacy student. It utilizes knowledge, skills, logical thinking, and even some creativity at times with the end goal of helping a patient. I get to act like a "mad scientist" and create compounds for patients. This competition has lead me to appreciate how much I have learned as a student and given me the opportunity to have a little fun."

CARLEY THOMPSON

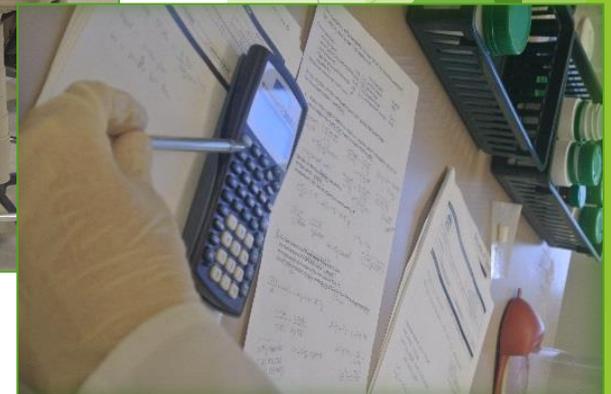

I am really looking forward to competing in this year's SPCC at USC. As runner-ups in last year's regional competition, our group came back this year hungry for a win. We were able to apply what we have learned throughout our semesters in the dosage lab curriculum and we were proud when we found out we were the winners. We are excited to have the opportunity to further work on our compounding and teamwork skills since we have been out of lab for a semester. Being able to compete and work closely with our professors will help us grow as professionals and it will allow us to expand our knowledge base even further. We will also have the opportunity at the national competition to be able to network with pharmacy students from other schools, and getting to go with some of our favorite professors is an added bonus!
